2017 - 2019

SASI Junior College, CGPA : 8.98

SECONDARY (X)

2017

Smt. Annapurna Vidyaniketan, CGPA : 9.7

Projects

Resume maker and to do list planner

The main objective of this project is to develop a client/server model which gives features like resume maker and to-do planner. Our resume maker is completely based on JavaScript meaning it will run completely on the client side without sending the sensitive data outside the client's computer. The TO DO planner allows the users to select a date and view/add all his plans for the day. We made this web application with HTML, CSS, JavaScript, PHP and MYSQL, as part of software engineering class and got the highest grade possible for the same.

Churn Modeling Prediction in Banking Sector

The main objective of this Churn Modeling Prediction is to analyze how many customers have left a particular service in the given period of time and how it impacts the business of the company. In this Mini Project, the Churn Modeling Prediction is done for the Banking Sector where we evaluate the number of customers who have exited from the banking services using python language.

Circuit Breaker using password

The objective of this project is to ensure the safety of the line man. The electric lineman safety system is designed to control the control panel doors and circuit breaker by using a password for the safety. A secured password is requested and received from the control room by the lineman for the point of repair or service.
